1 Introduction

This document reports on the internal project website (see Figure 1) that has been created for the INTEGRATE project. The website has been operational since end of March 2011. The site can be found at <http://atlas.ics.forth.gr/bscw/>

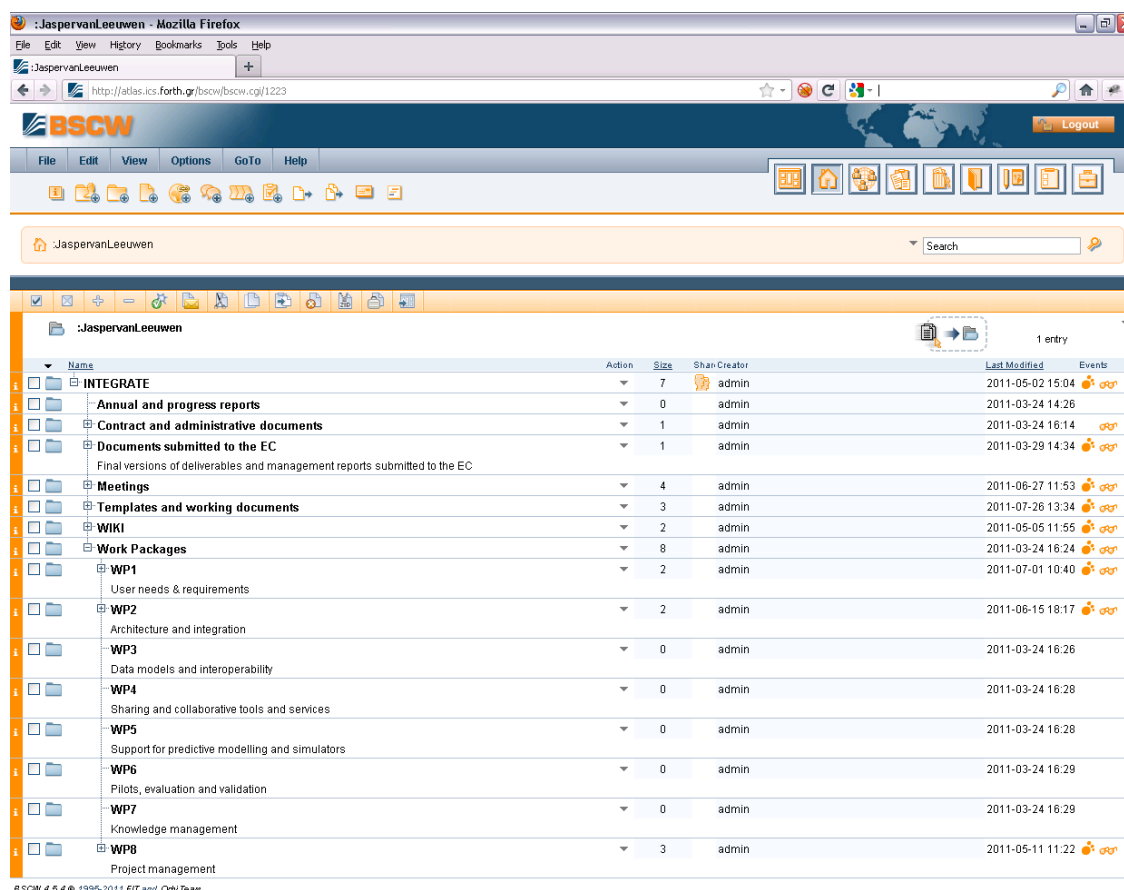

Figure 1 – Internal project website

In combination with the communication portal (wiki), the internal project website is part of INTEGRATE’s integral internal communication and collaboration strategy, aiming to communicate effectively with parties within the consortium. The project website’s main purpose is to augment the communication portal and provide a place for (parts of) documents and information that is under less flux compared to content on the communication portal.

2 Content of the internal project website

2.1 Main page

The main page acts as landing spot for visitors. When the website is loaded, the main page will be displayed (see Figure 1). The home page links to sub-content and has the following structure:

- Annual and progress reports
- Contract and administrative documents
- Documents submitted to the EC
- Templates and working documents
- WIKI usage information
- WorkPackages

3 Conclusions

The internal project website provides a complementary place to store (parts of) documents, and deliverables in particular. It augments the wiki - where content is more “dynamic” and the focus is on collaborative work - with a place where more or less stable contributions can be made and submissions can be archived.
